## IBM Nalaiya Thiran Assignment - 2

Build a python code, assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature

## Code:

```
import random

Temperature=random.randint(1,100)

Humidity=random.randint(1,100)

print(Temperature)

print(Humidity)

if((Temperature>38)&(Humidity>40)):

print("Temperature and Humidity are HIGH!")

print("*** ALARM ON ***")

else:

print("Temperature and Humidity are NORMAL!")

print("*** ALARM OFF ***")
```

## **Output**:

```
1 import random
2 Temperature=random.randint(1,100) 86
3 Humidity=random.randint(1,100) Temperature and Humidity are HIGH!
4 print(Temperature) *** ALARM ON ***
5 print(Humidity)
6 if((Temperature and Humidity are HIGH!")
7 print("Temperature and Humidity are HIGH!")
8 print("*** ALARM ON ***")
9 else:
10 print("Temperature and Humidity are NORMAL!")
11 print("*** ALARM OFF ***")
```

```
1 import random
2 Temperature=random.randint(1,100)
3 Humidity=random.randint(1,100)
4 print(Temperature)
5 print(Humidity)
6* if((Temperature and Humidity are HIGH!")
7 print("Temperature and Humidity are HIGH!")
8 print("*** ALARM OF ***")
9* else:
10 print("Temperature and Humidity are NORMAL!")
11 print("*** ALARM OFF ***")
```
